ASSET INTEGRITY MANAGEMENT SOFTWARE

ONE anomaly information management software, used by Oil & Gas operators, replaces legacy spread sheet repair registers with a single streamlined application providing major benefits for all types of installation.

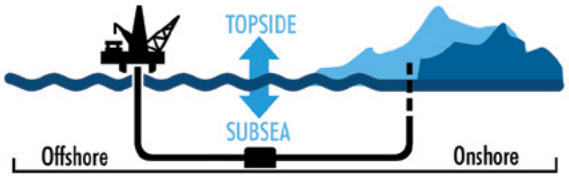
Used offshore and onshore for both topside and subsea defects, ONE tracks each anomaly on specific components and assets from discovery to closeout, recording assessments, associated tasks, actions, comments, documents and images.

IQ Integrity's ONE software is a customisable toolkit which can be implemented to suit any workflow or process requirement. Currently in use in the UK by Apache North Sea, Centrica Storage, Premier Oil and TAQA Bratani.

ONE provides complete anomaly management for nearly 10% of the UK North Sea market, including offshore platforms, onshore terminals and subsea infrastructure.

> "ONE has changed the way we look at and manage our anomaly's. The centralised system has many more advantages for our integrity process than was possible with our heritage systems. ONE's transparency and action tracking is absolutely total, the quality of information has increased significantly. It has cut about 40% off the administration time and we have an audit trail that makes compliance easier." Jim Saunderson, Mechanical TA for Apache North Sea

- Specifically designed for Oil & Gas operators
- Generic industry standard workflow
- Integrates multiple anomaly, temporary repair, leak, engineering and fabric maintenance functions within a single application
- Records pipework, vessel, mechanical and structural defects
- Multiple platforms and installations within a single interface
- Consistent information quality across all assets
- Transparent audit trail
- Tracks tasks & assigned action parties, ensuring timeframes are met
- Significant reduction in administration costs
- Ensures all found defects are managed responsibly and safely
- Secure online system, accessible through a standard web browser
- Regular software functionality upgrades
- Additional modular enhancements available



OFFSHORE INSPECTOR

- Simple logical anomaly creation workflow
- Select standard fields from dropdown selections
- Record descriptive text information and recommendations
- Upload documents and images
- Review actions pending
- Update progress for existing anomaly tasks and outcomes
- Formatted print version outputs

ONSHORE ENGINEER

- Complete access to all anomaly information within single source
- Comprehensive basic and advanced search features
- Record integrity assessments & manage anomaly to safe closeout
- Allocate multiple task types to selected action parties
- Set combination of task and anomaly due dates
- Manage anomaly to safe closeout

TASKING

- Tracks multiple tasks and assigned action parties, ensuring timeframes are met
- Consistent information quality
- Record progress of tasks within the anomaly life-cycle
- Summary 1-click reporting features
- Send system email alerts and updates

INTEGRITY MANAGER/ CONTROLLER

- Integrates all anomaly management functions across assets & fields within a single application
- Enables live status view and reporting of all anomalies, and due dates
- Increases quality of information, reducing administration time/cost
- Integrates multiple anomaly, temporary repair, leak, engineering and fabric maintenance functions
- Step-change increase in quality of anomaly information
- Live and historic reports and trend charts

*Customisable features for all roles
